MENAGE CONFORT

www.menage-confort.com

Made in Spain

▼ Since our early days we have devoted ourselves to steel transformation, creating useful shapes for everyday life.

In our first production centre, founded in 1947, we develop and manufacture parts for household white goods.

Subsequently, and due to the need of standardizing the manufacturing and improving the service to our customers a logistic centre and a regulating warehouse are built.

The increasingly dynamic evolution of the market, forces us to rationalize and separate the manufacturing of different kinds of product. Consequently a new production centre is set up in 1999.

Our continuous innovation, quality service, and meeting of our customer's needs has led us to a constant growth and the introduction of our products in different markets both nationally and internationally.

▼ PRODUCT DEVELOPMENT

Our design and research department is equipped with last generation computing technology, and our staff is highly qualified.

The ultimate protagonist in the development of a new product is the final user (consumer).

From the original idea, different stages follow, that are perfectly structured, and a final solution is reached, which is agreed with the customer.

User friendly assembling, functionality, looks, and utility quality, are the major premises when it comes to developing a new product.

▼ MANUFACTURE

Raw materials

The quality of a product relies heavily in the raw materials. Therefore these will have to meet established standards to reach the desired quality levels.

Transformation process

Later on in the transformation process we have quality control proceedings in each stage.

Coating

Once shaped, the product will be passed on to the coating section, in which each part is individually inspected. The features the coating must have, are specified in our quality system, and are refer to the looks, shock resistance, stainless capacity and adherence.

Assembling and packing

The finished product is passed on to our assembling and packing section, where each part is checked for its subsequent storing and shipping.

The appropriate design of the packaging ensures that no damages are inflicted during transport, and that our products reach their destination in perfect condition.

▼ SERVICE

Our capacity to offer a quality service relies in our technological resources and wide stock.

Marketing support

The necessary tools for the marketing and the promotion of our products are at the disposal of our customers.

We have available, catalogues, leaflets, technical and assembling drawings, as well as a regularly updated website.

After-sales service

We have the necessary human resources to give immediate answer to any query, whether this is commercial, administrative, technical or any other that our customers might have.

▼ QUALITY

Total quality is our main principle.

From the manufacturing process, logistics, storing, to customer care.

Our certificate of quality management UNE-EN ISO 9001-2008 proves it.
